

20-04-2019

- if the nodeSelector is removed , it won't effect the pod.
- A node selector is used , during the placement of the pod, not during the execution of the pod
- When we remove the label of the node and then if pod is terminated due to some reason, and when the new pod is getting created , will the pods be created or not ?????
 - it will be in PENDING state

v)
 (key: value)
 big node

- Does the node have adequate hardware resources ?
- Is the node running out of resources ?

Filtering:
Filter all the nodes in the cluster who are healthy

code affinity %

the primary purpose of Node Affinity is to ensure that the pods are hosted on a particular node
